Introduction

Since 2002 FYG Planners have pursued an evidence-based investment strategy. We identified and utilized an academically researched set of principles, with the aim of lowering client fees, and removing unreliable methods, such as forecasting and security selection, from the portfolio management process. This document offers a comparison of the evidence based, factor portfolio construction strategy (after fees) pursued by FYG since its inception in January 2002, against relevant market indices. Included for each construction comparison are returns over 1, 3, 5, 10 periods, since inception returns, a chart showing the growth of $1 since inception, and the risk/return relationship for the constructions and market indices since inception.

For further insight: there is a scorecard highlighting the number of funds that fail to outperform their market benchmark over varying time periods in Australia and the US. A historical look at factor performance in the US since the 1930's and how this informs our investment beliefs. A comparison between the fees of funds which may be used to construct similar portfolios to ours, against average fees in the Australian wholesale fund market. There are also two charts highlighting the annual weighting of positive and negative returns in Australian and US markets to highlight the benefit of patience, discipline and time when investing.

Academic research has shown using size, relative price and profitability factors in the construction of equity portfolios can potentially increase investment performance over long periods of time. These findings help to inform and shape our investment philosophy, but as with all historic performance data, it offers no guarantee about future performance. Notwithstanding, it is critical that every investment adviser maintains a consistent set of beliefs around portfolio management, so when used in conjunction with our investment philosophy the research outcomes in this document help to reaffirm that similar portfolio constructions are considered prudent enough to be pursued on behalf of clients. FYG advisers use separately managed accounts and portfolio constructions that will vary from client to client, according to their stated goals and risk tolerance.

Investors reading this document without oversight should understand the equity strategies illustrated do not take into account taxes, which would result in further differing performance. The market comparisons do not take into account fees or taxes, which would result in further differing performance. Investors reading without oversight should also acknowledge the performance disclaimer.

The FYG equity strategies used in this report are constructed with a view to academically accepted principles, from some of the worlds leading finance experts, such as:

Genuine Diversification Reduces Risk - Harry Markowitz 1952 (Nobel Prize Winner)
Cost of Capital is the Investors Expected Rate of Return - Merton Miller 1961 (Nobel Prize Winner)
Risk & Return are Related - William Sharpe 1964 (Nobel Prize Winner)
Equity Markets are Efficient - Professor Eugene Fama 1966 (Nobel Prize Winner)
Small Cap Stocks outperform Large Cap Stocks but with Greater Volatility - Rolf Banz, University of Chicago 1981
Asset Allocation rather than Stock Selection and Market Timing Dominate Investment Performance - Garry Brinson, Randolph Hood and Gilbert Beebower 1983 & 1991 study of 91 major pension funds in the USA.
Out of Favour stocks (High Book to Market) Have Outperformed Popular Stocks (Low Book to Market) - Professor Eugene Fama and Professor Kenneth French, University of Chicago 1992
Gross Profitability Predicts Higher Returns – Robert Novy-Marx, University of Rochester 2013

Performance Disclaimer: Past performance is no indication of future performance: The information in this document is used to inform our beliefs around investing and educate investors about the historical performance characteristics of market factors over the short and long term. There are no guarantees when investing and any historic performance characteristics that may be displayed by the both the FYG equity strategies and the market portfolios contained in this report offer no indication of future performance. For further information we recommend that you read our more comprehensive "Investment Philosophy" and have a detailed discussion with an adviser who can assess your needs before deciding to invest.

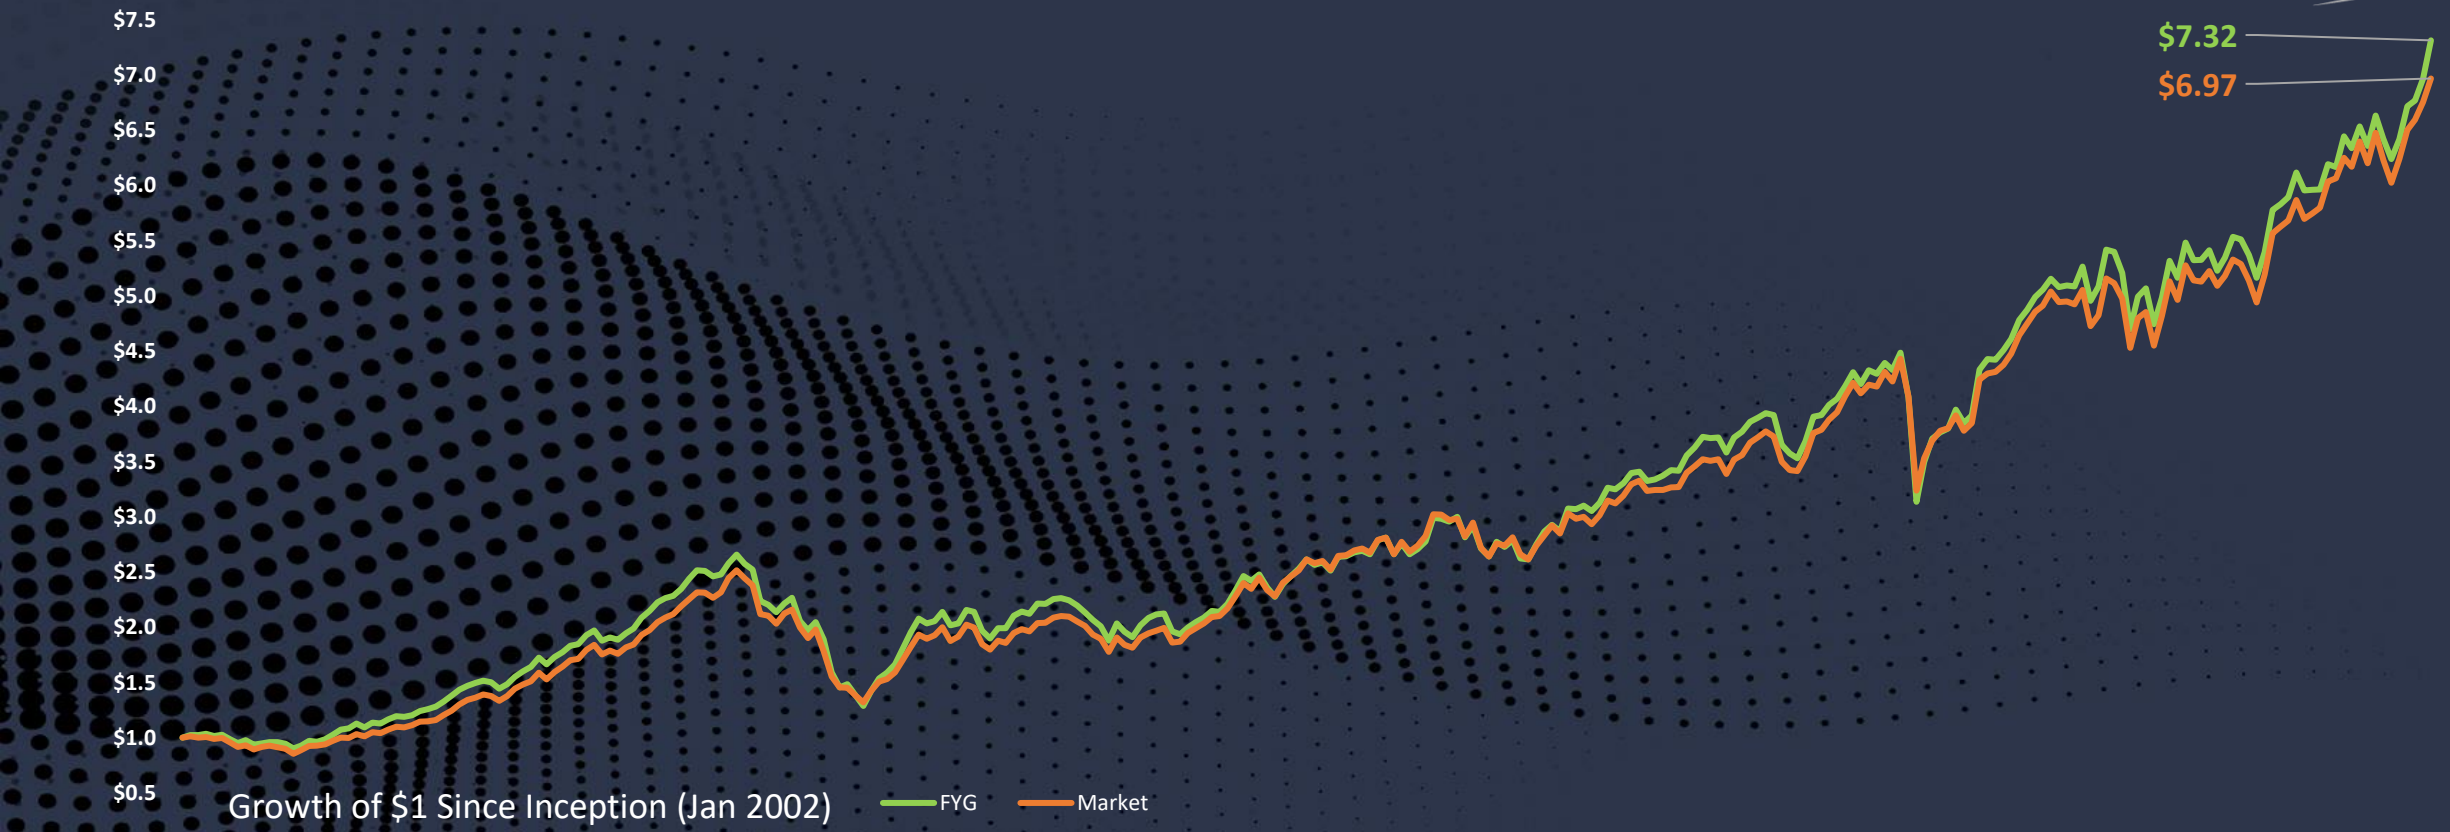
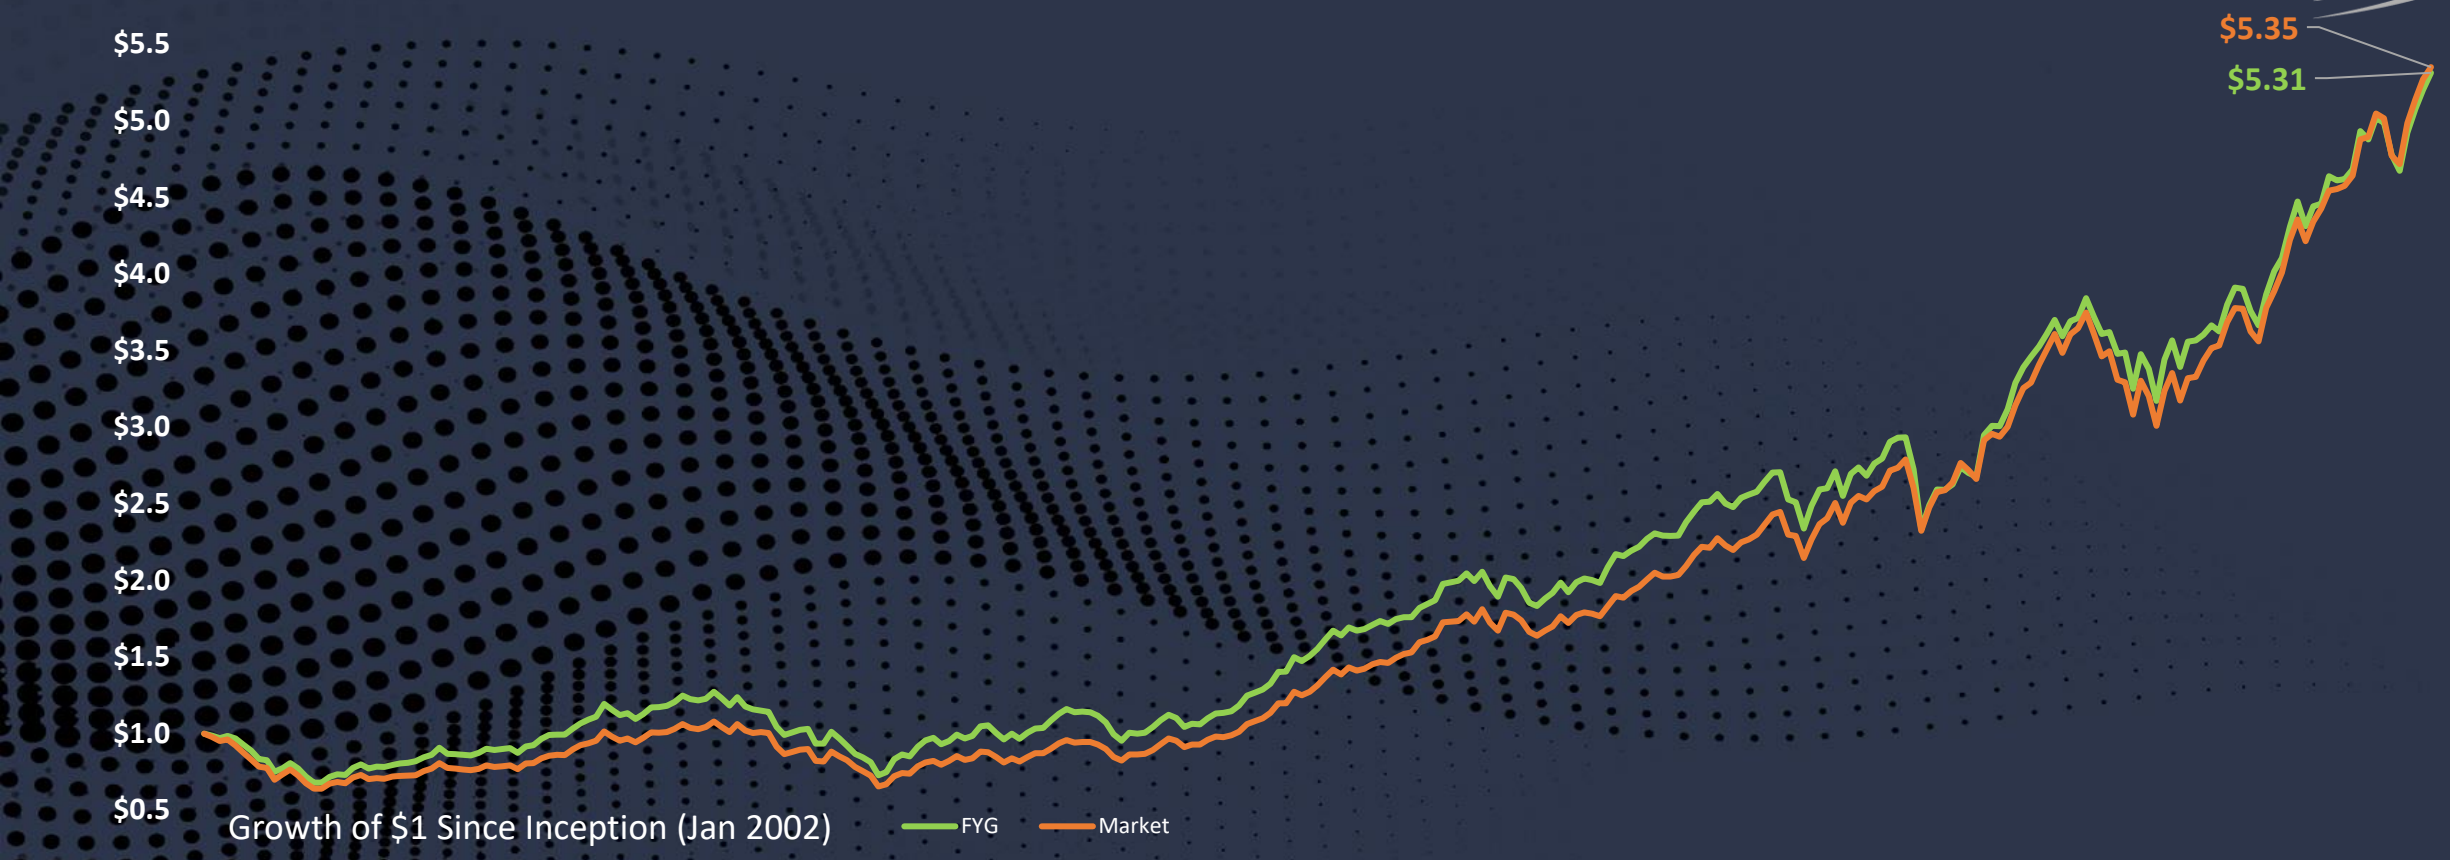
FYG Australian Equity Strategy (after fees) vs Market Index: August 2025



Periodic Performance	1 Year	3 Years	5 Years	10 Years	Since Inception Jan 2002
FYG Australian Strategy (after fees)	18.61%	12.99%	13.00%	10.42%	8.77%
Market Index Portfolio	14.91%	12.81%	12.20%	9.87%	8.55%
Outperformance/Underperformance	3.70%	0.18%	0.80%	0.55%	0.22%

For detailed information on the data and portfolio constructions used in this comparison please refer to Sources and Descriptions of Data. “Net of fees” refers to investment management fees.

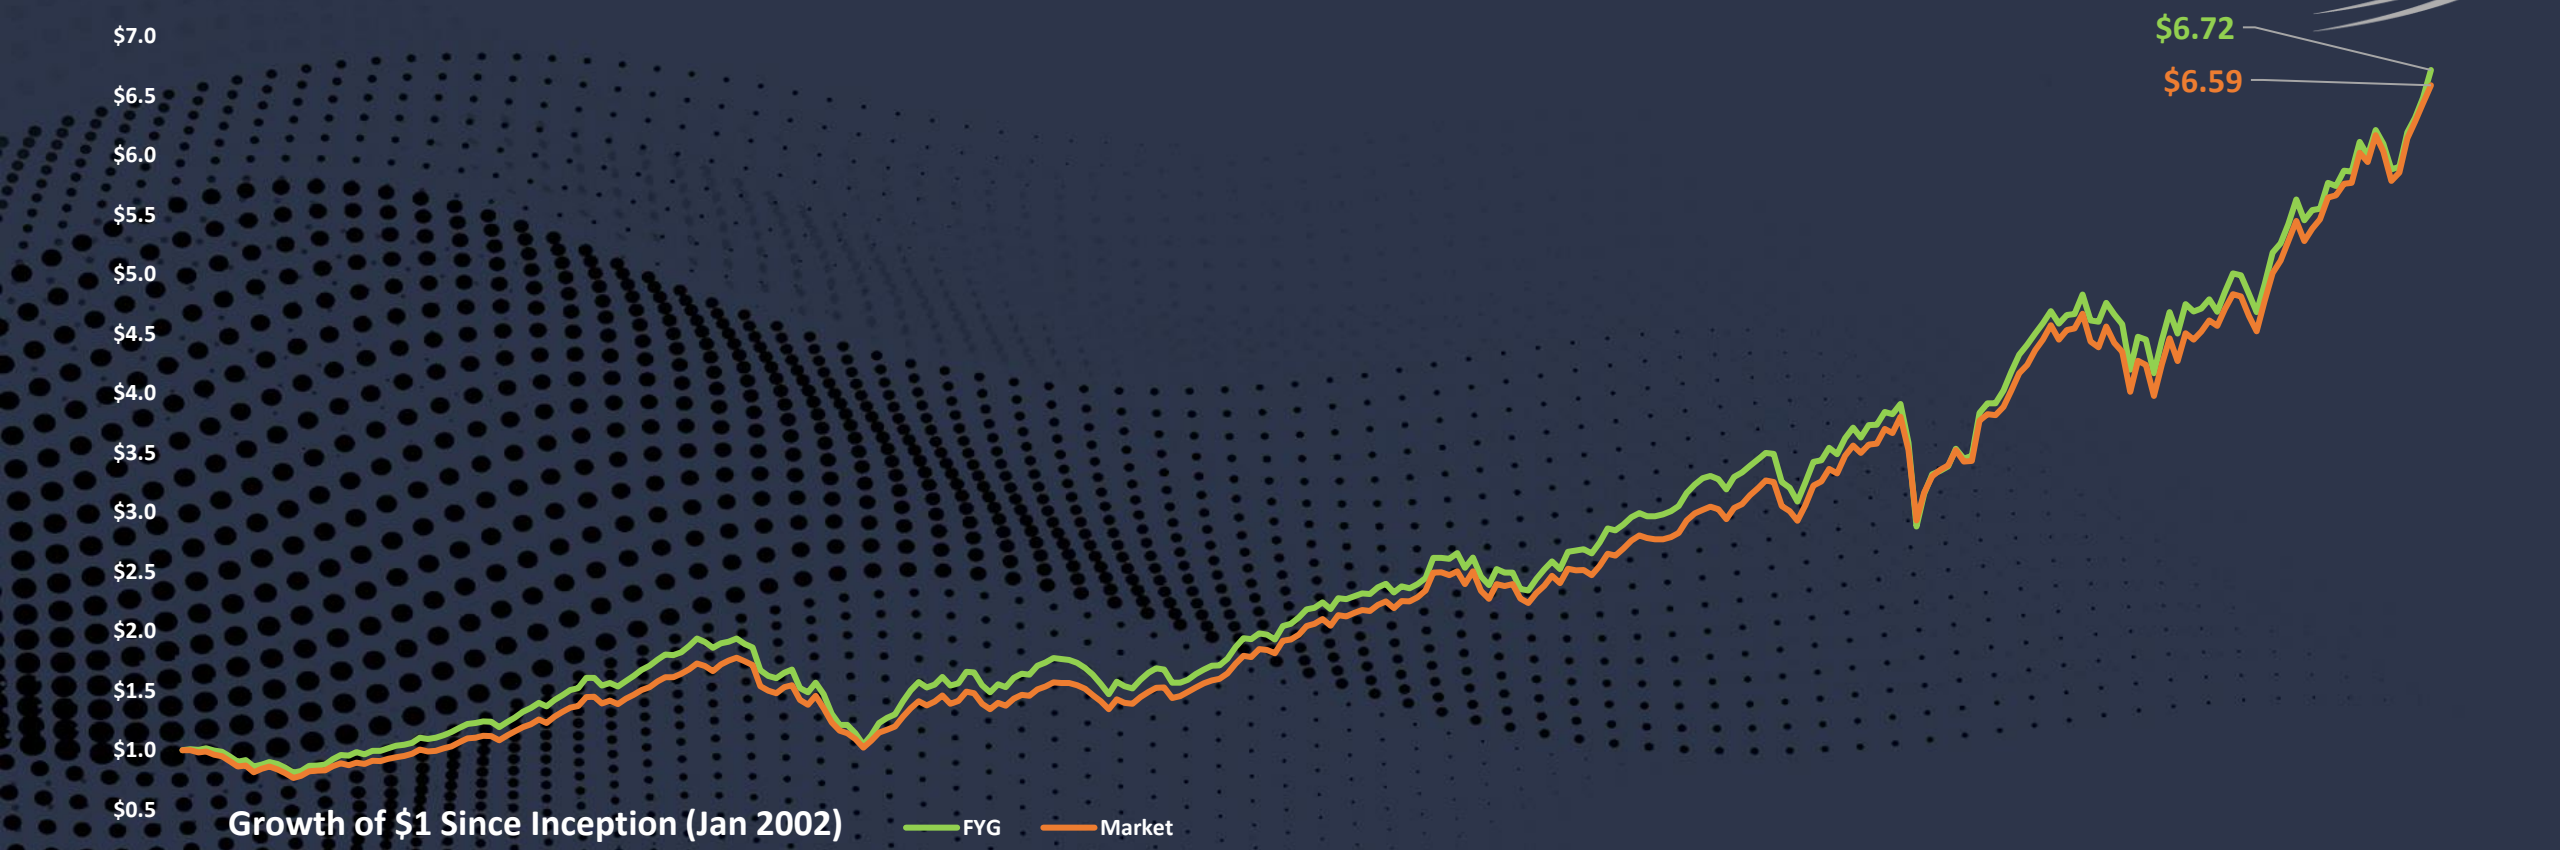
FYG Global Equity Strategy (after fees) vs Market Index: August 2025



Periodic Performance	1 Year	3 Years	5 Years	10 Years	Since Inception Jan 2002
FYG Global Strategy (after fees)	15.21%	16.27%	14.17%	10.47%	7.31%
Market Index Portfolio	17.50%	18.66%	14.10%	11.99%	7.34%
Outperformance/Underperformance	(-2.29%)	(-2.39%)	0.07%	(-1.52%)	(-0.03%)

For detailed information on the data and portfolio constructions used in this comparison please refer to Sources and Descriptions of Data. "Net of fees" refers to investment management fees.

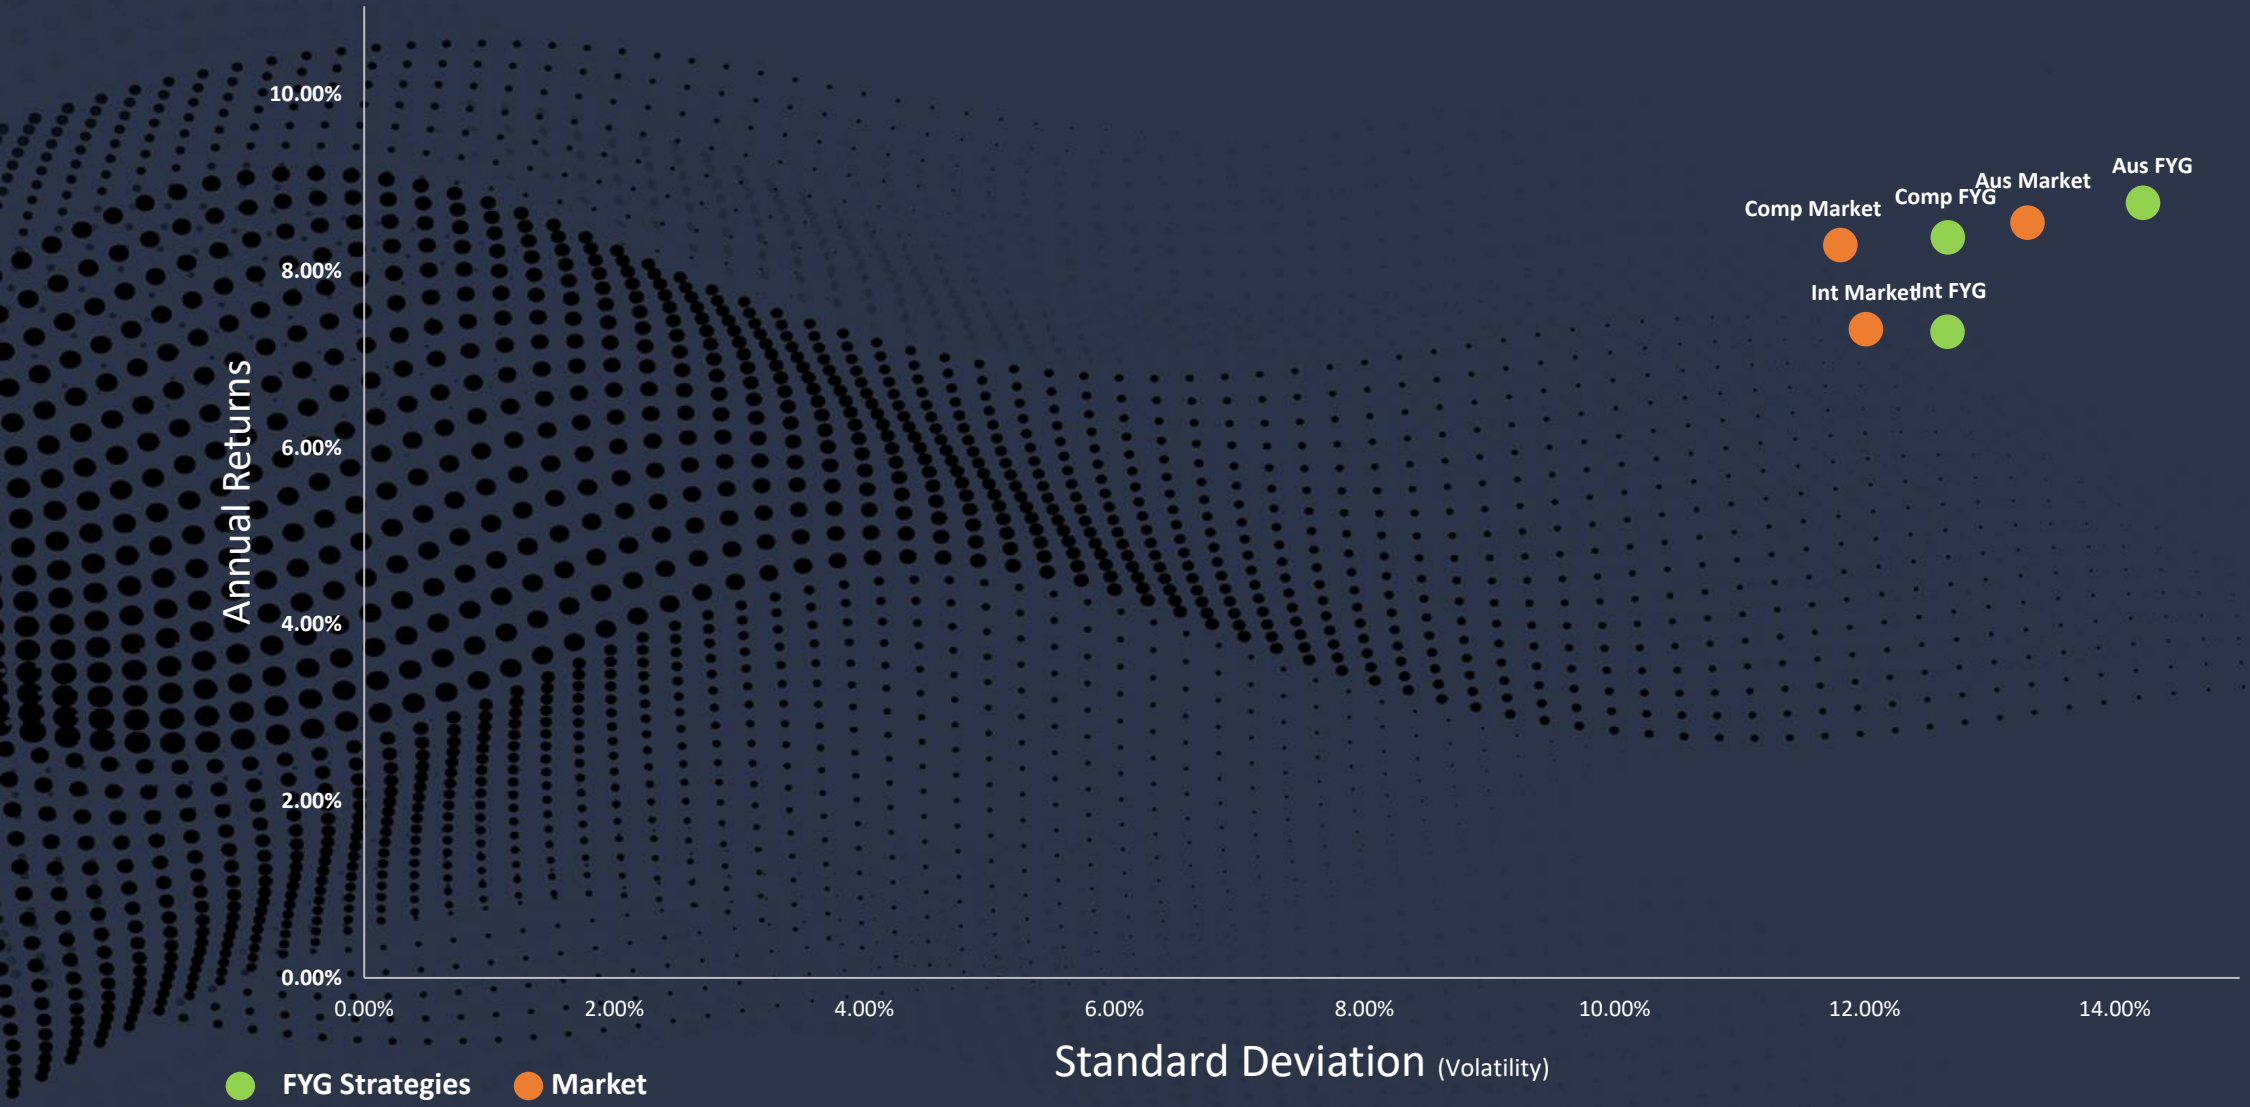
FYG Composite Australia/Global Strategy (after fees) vs Market Index: August 2025



Periodic Performance	1 Year	3 Years	5 Years	10 Years	Since Inception Jan 2002
FYG Composite Equity Strategy (after fees)	17.01%	14.71%	13.71%	10.56%	8.38%
Market Index Portfolio	16.35%	15.85%	13.34%	10.91%	8.29%
Outperformance/Underperformance	0.66%	(-1.14%)	0.37%	(-0.35%)	0.09%

For detailed information on the data and portfolio constructions used in this comparison please refer to Sources and Descriptions of Data. "Net of fees" refers to investment management fees.

Risk/Return Relationship: Strategies vs. Market Index Since Inception



'Aus' represents Australian equities. 'Int' represents Global equities. 'Comp' represents a composite of Australian and Global equities.

For detailed information on the data and portfolio constructions used in this comparison please refer to Sources and Descriptions of Data.

Funds That Failed to Outperform the Index (End 2024)

Time Period	1 Year	3 Years	5 Years	10 Years	15 Years
Australian Equity General	55.63%	74.59%	73.84%	82.71%	85.13%
Global Funds	85.42%	86.27%	90.69%	94.14%	95.09%
US All Domestic Funds	78.65%	87.65%	84.69%	89.70%	93.23%

Keeping up with the market long term is hard.

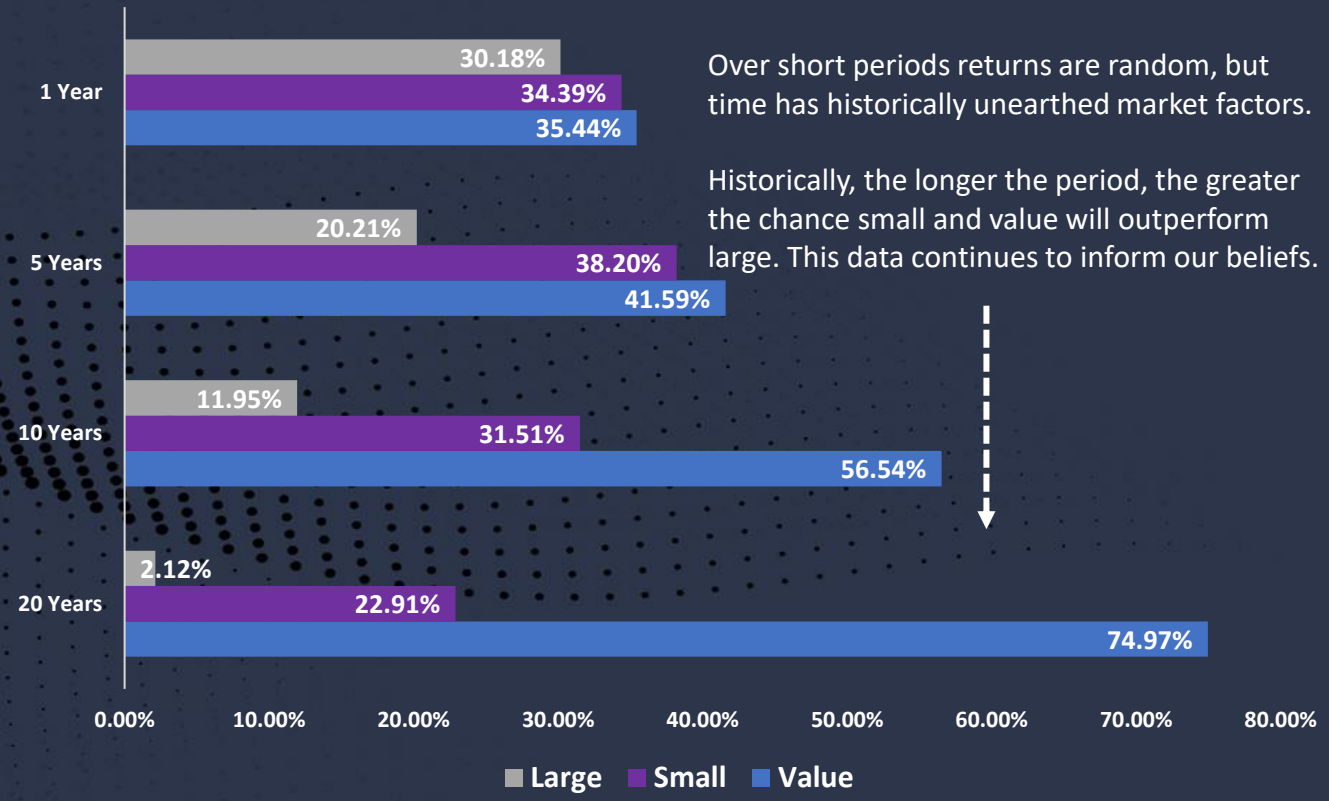
For source of data used in this comparison please refer to Sources and Descriptions of Data.

Why Pursue Factors? What History Tells Us About Factor Performance (end December 2024)

Decade Annualised	US Large	US Small	US Value
1930's	-0.05%	3.66%	-3.20%
1940's	9.17%	16.13%	17.10%
1950's	19.35%	19.04%	22.11%
1960's	7.81%	13.77%	12.13%
1970's	5.86%	9.34%	13.77%
1980's	17.55%	15.43%	20.67%
1990's	18.21%	14.60%	16.11%
2000's	-0.95%	5.33%	5.59%
2010's	13.56%	10.83%	11.19%
2020 – 2024	14.53%	9.29%	13.36%
Total Period	10.06%	11.91%	12.64%

Small and value aren't guarantees and the premiums aren't always present. The 1990's & 2010's are examples.

US Large, Value, Small Rolling Monthly Periods 1930 - 2024



Over short periods returns are random, but time has historically unearthed market factors.

Historically, the longer the period, the greater the chance small and value will outperform large. This data continues to inform our beliefs.

This comparison contains simulated data and does not represent actual returns. For detailed information on the indices used in this comparison please refer to Sources and Descriptions of Data.

Growth of $1 since inception (Jan 2002) Compares the growth of wealth since inception in January 2002 concluding with the month of the report.

Year Risk/Return Relationship Across Portfolios Since Inception: Displays the annualised return versus standard deviation since inception in January 2002 for the previously noted constructions ending with the month of the report. Annualised standard deviation number is presented as an approximation by multiplying the monthly number by the square root of the number of periods in a year. Please note that the number computed from annual data may differ materially from this estimate.
